Monster AI

PLAYER AID 2
§ 9.3–9.5 · § 3.4 · C.8

Each Monster activates Remove Prone. Pick the **Primary Target** (printed Target Priority first). Roll for spent Recharge abilities. Resolve start-of-activation Special Abilities.

1 Any AI Step valid?

- **YES** → Resolve the **first** valid one, lowest number first. **on d6 N+:** roll 1d6, need N or higher. *Says it continues? Go to step 2.* **ENDS**
- **NO** ↓

2 Engaged?

- **YES** → Attack the Engaged enemy with the **lowest current HP**. Use Multi-Attack if listed; otherwise melee, or ranged if it has no melee attack. **ENDS**
- **NO** ↓

3 Enemy visible?

- **YES** → Move toward the Primary Target; attack if Engaged on arrival. **Ranged:** move to the nearest legal firing position, then attack. **Knocked Out target:** stop within melee distance and attack. **ENDS**
- **NO** ↓

4 Hidden enemy within 12″ and LOS?

- **YES** → **Search:** the nearest one's controller makes a DEX Check. On a failure, that enemy is no longer Hidden. **ENDS**
- **NO** ↓

5 Move toward the Guard Point, objective, patrol route or scenario destination. **ENDS**

Primary Target

The **nearest visible enemy** within 12″ and LOS. Hidden and Invisible enemies don't count unless a rule says so. Re-pick if it stops being legal.

TIES, IN ORDER

1. Lowest current HP
2. Last to damage this Monster
3. Random Determination

Movement

1. Shortest legal route
2. Tied routes: avoid hazards
3. End at the nearest spot to attack or threaten

Never

No AP, NRG or Reactions. Effects that call for a Check apply unless Immune; Terrain Checks always succeed.

Blocked Route

Can't reach and attack the Primary Target? Switch to the nearest visible enemy it can. None: move full Speed toward the target (or a firing position) and don't attack.

Monster AI

PLAYER AID 2
§ 9.3–9.5 · § 3.4 · C.8

The Monster Phase

1 Wake-up

Check every Resting Group against the wake-up triggers and any scenario rule.

2 Groups in order

Each **Awake** Group activates in ascending Group number. Players never choose, delay, skip or reorder Groups.

3 Monsters in a Group

No order set? Pick the next Monster by Random Determination. Resolve its activation completely, then repeat.

Woken mid-phase: the Group joins the remaining order. If its place has passed, it goes next after the current Group or effect. Ties: ascending number.

Wake-up Triggers

A **Resting** Group does not activate. It wakes, and stays Awake for the adventure, when:

- an enemy moves within **6″** (no LOS needed);
- a visible enemy enters its LOS within **12″**;
- the Group suffers damage;
- an Explosion, collapsing terrain or a loud effect occurs within **6″**;
- a scenario rule wakes it.

Measure from any Monster in the Group. A Hidden enemy trips the 6″ trigger only within its Hide distance, and stays Hidden. Hidden or Invisible enemies never trip the 12″ trigger.

Setup

Unless the scenario says otherwise, each Group starts **Resting**, within **3″** of its starting point, with a **Guard Point**: the nearest scenario landmark, else the nearest designated major terrain, else its start. Ties: random.

Allegiance

Neutral Groups are allied to each other and hostile to every party. They never target, engage or wake because of allied Monsters. **Hostile to all:** every other combatant is an enemy, except its own Group.

Bosses

Start **Awake** and use **Relentless Assault**, not the Monster Phase: after each hostile Hero's activation, the Boss takes 1 activation. A Hero left at 0 AP by a Reaction before activating triggers it after the current activation or effect. At most one per starting hostile Hero each round. AI Steps and start-of-activation abilities only on the first activation each round; every attack step uses the full Multi-Attack.

Areas

Origin in LOS. Cover the most enemies, then the fewest allies, then include the Primary Target; then random.

AP Changes

A Monster ignores AP loss, gain or costs. Instead, next activation: no AI Steps, and its first attack damage roll has Disadvantage.
